

# TLV6256x 采用 5 引脚 SOT-23 封装的 1.5A 高效降压转换器

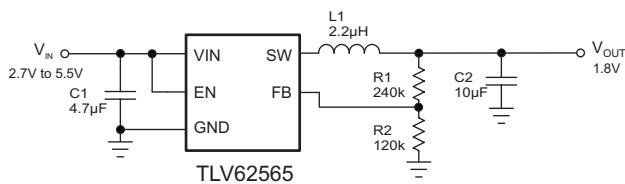

## 1 特性

- 输入电压范围：2.7V 至 5.5V
- 1.5MHz 典型开关频率
- 输出电流高达 1.5A（最大值）
- 自适应接通时间电流控制
- 针对轻载效率的省电模式
- 50µA 运行静态电流
- 效率高达 95%
- 过流保护
- 95% 最大占空比
- 出色的交流和瞬态负载响应
- 电源正常输出，TLV62566
- 250µs 的内部软启动（典型值）
- 可调节输出电压
- 热关断保护
- 采用 5 引脚小外形尺寸晶体管 (SOT)-23 封装

## 2 应用

- 便携式设备
- DSL 调制解调器
- 硬盘驱动器
- 机顶盒
- 平板电脑

## 4 简化电路原理图

## 3 说明

TLV62565/6 器件是针对小型解决方案尺寸和高效率进行优化的同步降压转换器。此器件集成了能够传送高达 1.5A 输出电流的开关。

此器件借助谷值电流模式控制系统配置，根据自适应接通时间进行工作。中等或重负载时的典型工作频率为 1.5MHz。此器件被优化以便即使在使用小型外部组件时也能实现极低的输出电压纹波，并且特有一个出色的负载瞬态响应。

轻负载期间，TLV62565/6 在最低静态电流（典型值 50µA）时自动进入省电模式以在整个负载电流范围内保持高效率。关断时，流耗减少至小于 1µA。

TLV62565/6 通过一个外部电阻分压器来提供一个可调输出电压。输出电压启动斜坡由一个内部软启动控制，通常情况下为 250µs。通过配置使能 (TLV62565) 和电源正常 (TLV62566) 引脚也有可能实现电源排序。其它诸如过流保护和过热保护的特性是内置的。

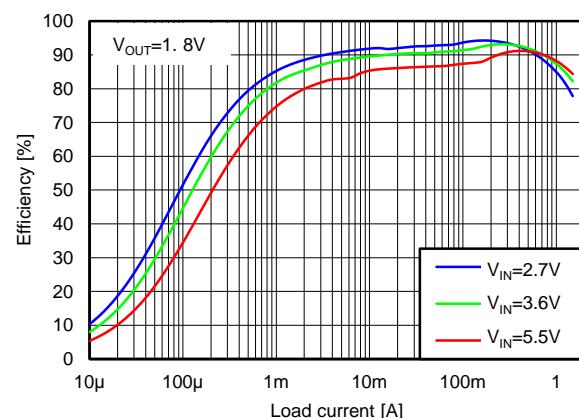

TLV62565/6 器件采用 5 引脚 SOT-23 封装。

### 器件信息<sup>(1)</sup>

器件型号	封装	封装尺寸（标称值）
TLV62565 和 TLV62566	SOT-23 (5)	2.90mm x 1.60mm

TLV62566	PG

## 7 Pin Configuration and Functions

**Pin Functions**

NAME	PIN		I/O/PWR	DESCRIPTION
	NUMBER	TLV62565		
EN	1	—	I	Device enable logic input. Logic HIGH enables the device, logic low disables the device and turns it into shutdown.
FB	5	5	I	Feedback pin for the internal control loop. Connect this pin to the external feedback divider.
GND	2	2	PWR	Ground pin.
PG	—	1	O	Power Good open drain output. This pin is high impedance if the output voltage is within regulation. It is pulled low if the output is below its nominal value. It is also in logic low when $V_{IN}$ below UVLO or thermal shutdown triggers.
SW	3	3	PWR	Switch pin connected to the internal MOSFET switches and inductor terminal. Connect the inductor of the output filter to this pin.
VIN	4	4	PWR	Power supply voltage input.

## 8 Specifications

### 8.1 Absolute Maximum Ratings

Over operating free-air temperature range (unless otherwise noted)<sup>(1)</sup>

		MIN	MAX	UNIT
Voltage <sup>(2)</sup>	VIN, EN, PG	-0.3	7	V
	SW	-0.3	V <sub>IN</sub> +0.3	V
	FB	-0.3	3.6	V
Sink current, I <sub>PG</sub>	PG		660	µA
Continuous total power dissipation		See <i>Thermal Information</i>		
Operating junction temperature, T <sub>J</sub>		-40	150	°C
Storage temperature, T <sub>stg</sub>		-65	150	°C

(1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

(2) All voltage values are with respect to network ground terminal.

### 8.2 ESD Ratings

			VALUE	UNIT
V <sub>(ESD)</sub>	Electrostatic discharge	Human-body model (HBM), per ANSI/ESDA/JEDEC JS-001 <sup>(1)</sup>	±2000	V
		Charged-device model (CDM), per JEDEC specification JESD22-C101 <sup>(2)</sup>	±500	V

(1) JEDEC document JEP155 states that 500-V HBM allows safe manufacturing with a standard ESD control process.

(2) JEDEC document JEP157 states that 250-V CDM allows safe manufacturing with a standard ESD control process.

### 8.3 Recommended Operating Conditions<sup>(1)</sup>

		MIN	TYP	MAX	UNIT
V <sub>IN</sub>	Input voltage, VIN	2.7		5.5	V
T <sub>A</sub>	Operating ambient temperature	-40		85	°C

(1) Refer to the *Application and Implementation* section for further information.

### 8.4 Thermal Information

THERMAL METRIC <sup>(1)</sup>		TLV62565, TLV62566	UNIT
		DBV (5 Pins)	
R <sub>θJA</sub>	Junction-to-ambient thermal resistance	208.3	°C/W
R <sub>θJC(top)</sub>	Junction-to-case (top) thermal resistance	73.7	
R <sub>θJB</sub>	Junction-to-board thermal resistance	36.1	
Ψ <sub>JT</sub>	Junction-to-top characterization parameter	2.3	
Ψ <sub>JB</sub>	Junction-to-board characterization parameter	35.3	
R <sub>θJC(bot)</sub>	Junction-to-case (bottom) thermal resistance	N/A	

(1) For more information about traditional and new thermal metrics, see the *IC Package Thermal Metrics* application report, [SPRA953](#).

## 8.5 Electrical Characteristics

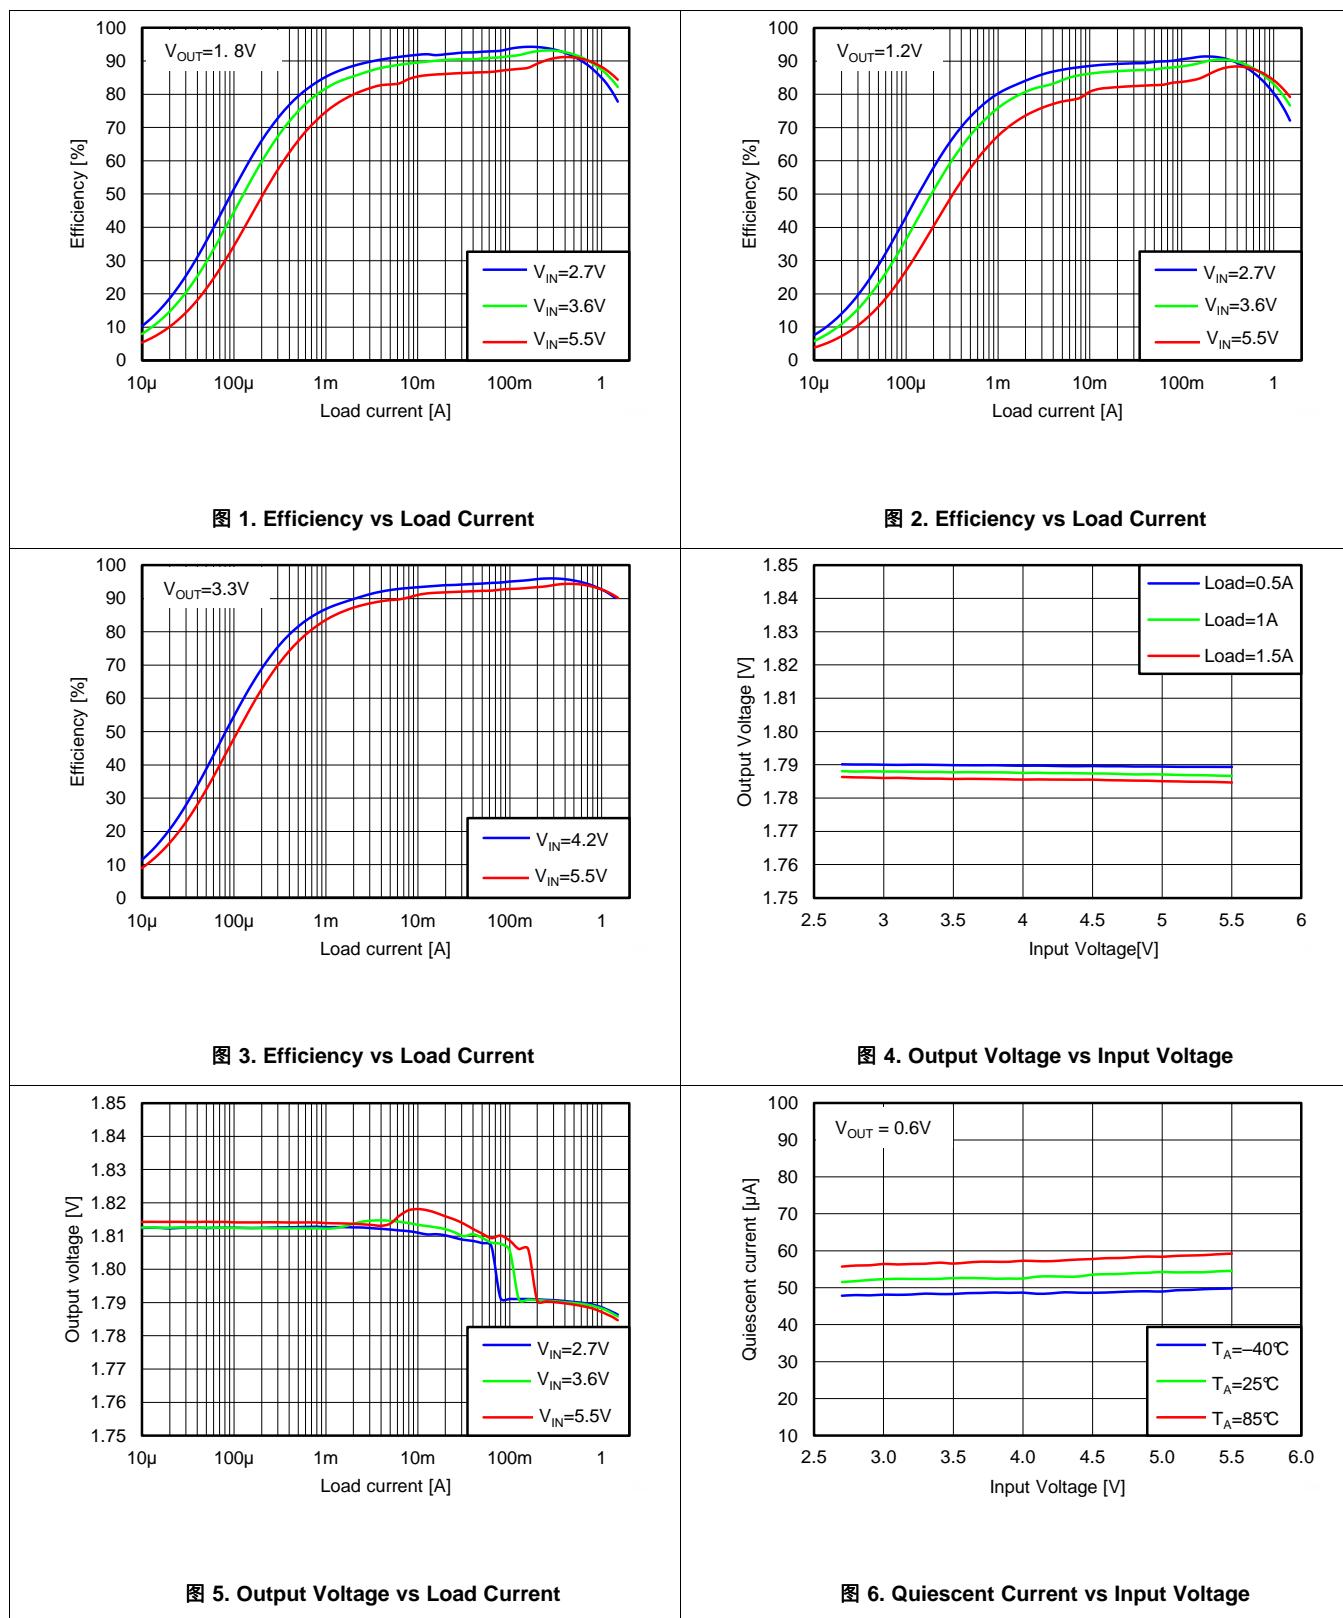

Over recommended free-air temperature range,  $V_{IN} = 3.6\text{ V}$ ,  $T_A = -40^\circ\text{C}$  to  $85^\circ\text{C}$ , typical values are at  $T_A = 25^\circ\text{C}$  (unless otherwise noted)

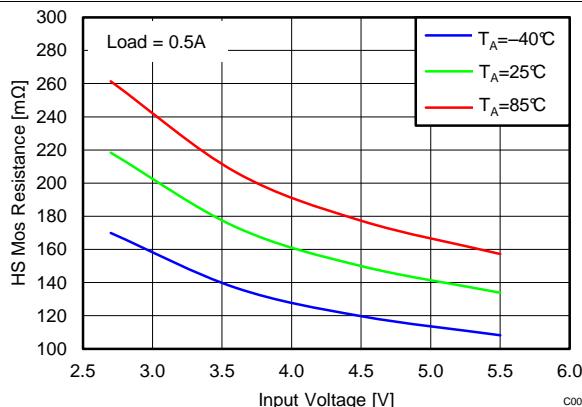

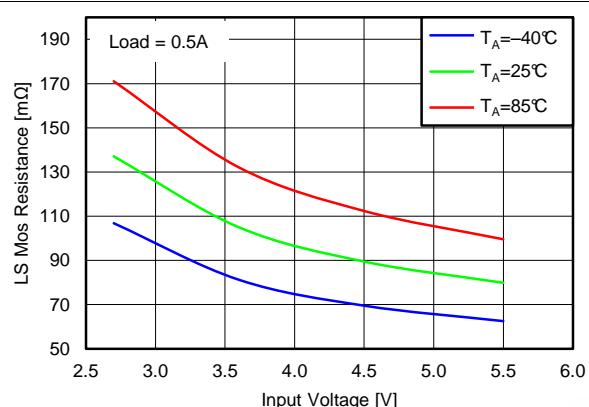

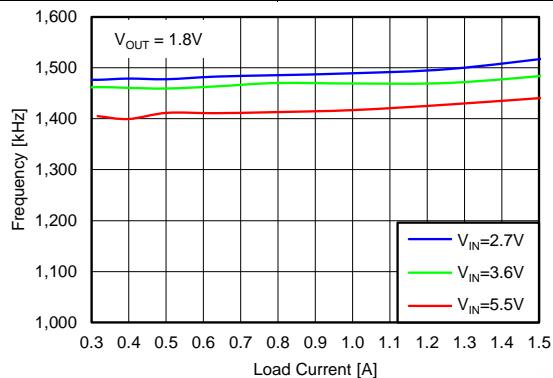

PARAMETER		TEST CONDITIONS	MIN	TYP	MAX	UNIT
<b>SUPPLY</b>						
$V_{IN}$	Input voltage		2.7	5.5	5.5	V
$I_Q$	Quiescent current into $V_{IN}$ pin	$I_{OUT} = 0\text{ mA}$ , Not switching	50			$\mu\text{A}$
$V_{UVLO}$	Under voltage lock out	$V_{IN}$ falling	2.2	2.3	2.3	V
	Under voltage lock out hysteresis		200			$\text{mV}$
$T_{JSD}$	Thermal shutdown	Junction temperature rising	150			$^\circ\text{C}$
	Thermal shutdown hysteresis	Junction temperature falling below $T_{JSD}$	20			
<b>LOGIC INTERFACE, TLV62565</b>						
$V_{IH}$	High-level input voltage	$2.7\text{ V} \leq V_{IN} \leq 5.5\text{ V}$	1.2			V
$V_{IL}$	Low-level input voltage	$2.7\text{ V} \leq V_{IN} \leq 5.5\text{ V}$		0.4	0.4	V
$I_{SD}$	Shutdown current into $V_{IN}$ pin	$EN = \text{LOW}$	0.1	1	1	$\mu\text{A}$
$I_{EN,LKG}$	EN leakage current		0.01	0.16	0.16	$\mu\text{A}$
<b>POWER GOOD, TLV62566</b>						
$V_{PG}$	Power Good low threshold	$V_{FB}$ falling referenced to $V_{FB}$ nominal	90%			
	Power Good high threshold	$V_{FB}$ rising referenced to $V_{FB}$ nominal	95%			
$V_L$	Low level voltage	$I_{sink} = 500\text{ }\mu\text{A}$		0.4	0.4	V
$I_{PG,LKG}$	PG Leakage current	$V_{PG} = 5.0\text{ V}$	0.01	0.17	0.17	$\mu\text{A}$
<b>OUTPUT</b>						
$V_{OUT}$	Output voltage		0.6	$D_{MAX} \cdot V_{IN}$	0.6	V
$V_{FB}$	Feedback regulation voltage	PWM operation, $T_A = -40^\circ\text{C}$ to $85^\circ\text{C}$	0.588	0.6	0.612	V
		PWM operation, $T_A = 85^\circ\text{C}$	0.594	0.6	0.606	V
		PFM comparator threshold		0.9%		
$I_{FB}$	Feedback input bias current	$V_{FB} = 0.6\text{ V}$	10	100	100	nA
$R_{DS(on)}$	High-side FET on resistance	$I_{SW} = 500\text{ mA}$ , $V_{IN} = 3.6\text{ V}$	173			$\text{m}\Omega$
	Low-side FET on resistance	$I_{SW} = 500\text{ mA}$ , $V_{IN} = 3.6\text{ V}$	105			
$I_{LIM,LS}$	Low-side FET valley current limit		1.5			A
$I_{LIM,HS}$	High-side FET peak current limit		1.8			A
$f_{SW}$	Switching frequency		1.5			MHz
$D_{MAX}$	Maximum duty cycle		95%			
$t_{OFF,MIN}$	Minimum off time		40			ns

## 10 Detailed Description

### 10.1 Overview

The TLV62565/6 device family includes two high-efficiency synchronous step-down converters. Each device operates with an adaptive on-time control scheme, which is able to dynamically adjust the on-time duration based on the input voltage and output voltage so that it can achieve relative constant frequency operation. The device operates at typically 1.5-MHz frequency pulse width modulation (PWM) at moderate to heavy load currents. Based on the  $V_{IN}/V_{OUT}$  ratio, a simple circuit sets the required on time for the high-side MOSFET. It makes the switching frequency relatively constant regardless of the variation of input voltage, output voltage, and load current. At the beginning of each switching cycle, the high-side switch is turned on and the inductor current ramps up to a peak current that is defined by on time and inductance. In the second phase, once the on time expires, the high-side switch is turned off while the low-side switch is being turned on. The current through the inductor then decays until triggering the valley current limit determined by the output of the error amplifier. Once this occurs, the on timer is set to turn the high-side switch back on again and the cycle is repeated.

The TLV62565/6 device family offers excellent load transient response with a unique fast response constant on-time valley current mode. The switching frequency changes during load transition so that the output voltage comes back in regulation faster than a traditional fixed PWM control scheme. [图 10](#) shows the operation principles of the load transient response of the TLV62565/6. Internal loop compensation is integrated which simplifies the design process while minimizing the number of external components. At light load currents the device automatically operates in Power Save Mode with pulse frequency modulation (PFM).

**图 10. Operation in Load Transient**

## 10.2 Functional Block Diagrams

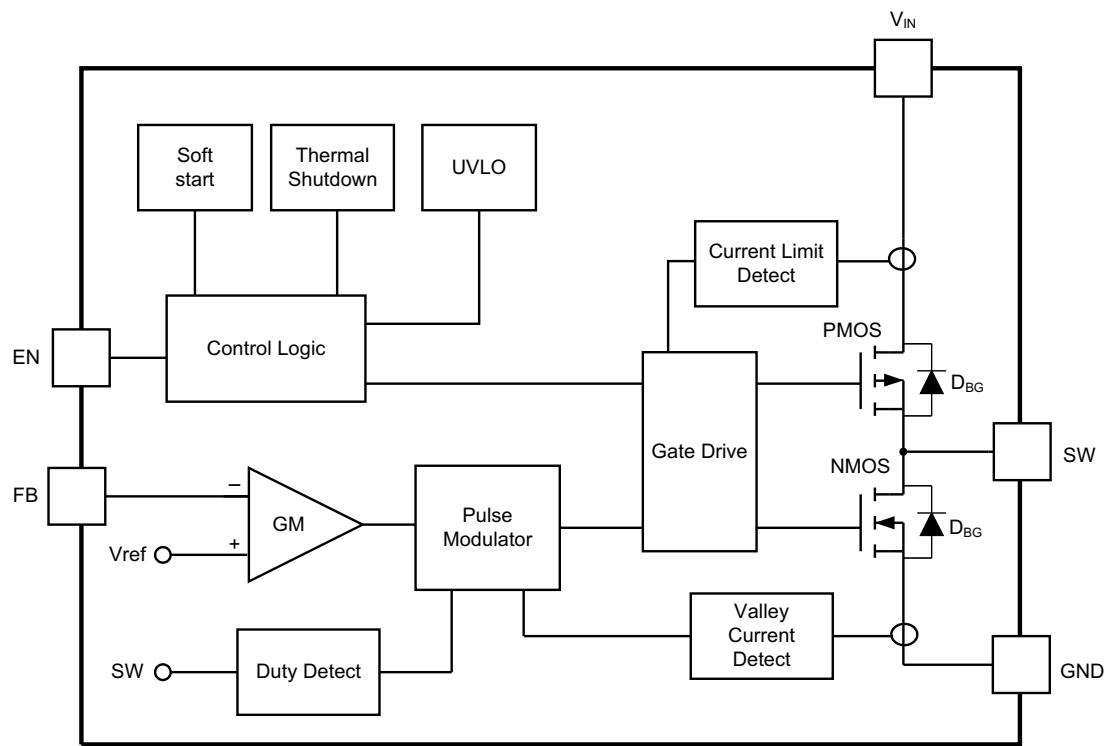

图 11. TLV62565 Functional Block Diagram

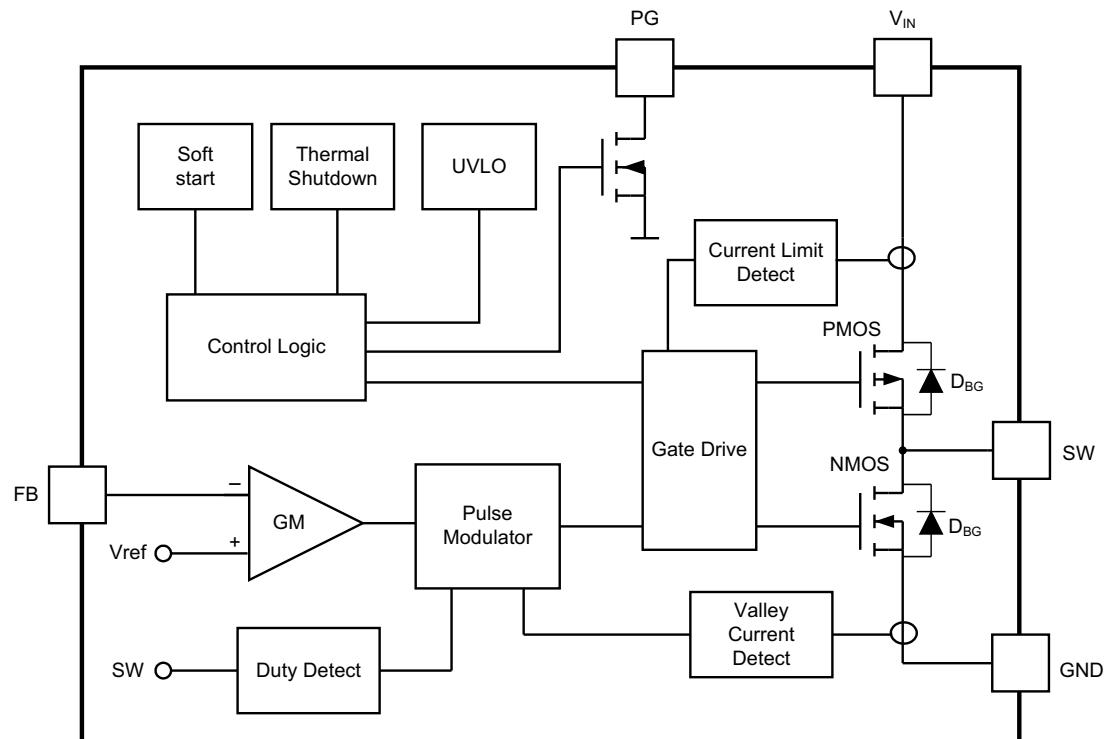

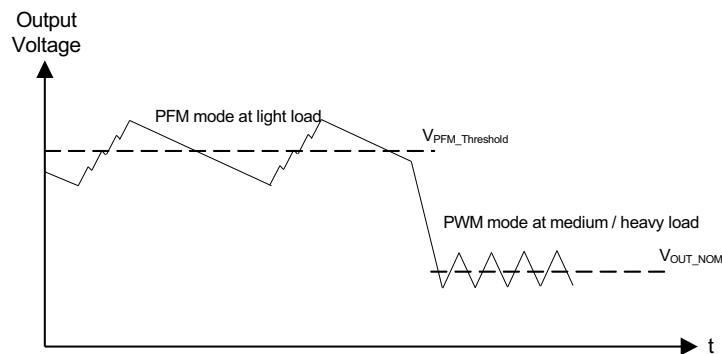

图 12. TLV62566 Functional Block Diagram

## 10.3 Feature Description

### 10.3.1 Power Save Mode

The device integrates a Power Save Mode with PFM to improve efficiency at light load. In Power Save Mode, the device only switches when the output voltage trips below a set threshold voltage. It ramps up the output voltage with several pulses and stops switching when the output voltage is higher than the set threshold voltage. PFM is exited and PWM mode entered in case the output current can no longer be supported in Power Save Mode. The threshold of the PFM comparator is typically 0.9% higher than the normal reference voltage. [图 13](#) shows the details of PFM/PWM mode transition.

**图 13. Output Voltage in PFM/PWM Mode**

### 10.3.2 Enabling/Disabling the Device

The device is enabled by setting the EN input to a logic HIGH. Accordingly, a logic LOW disables the device. If the device is enabled, the internal power stage starts switching and regulates the output voltage to the set point voltage. The EN input must be terminated and should not be left floating.

### 10.3.3 Soft Start

After enabling the device, internal soft-start circuitry monotonically ramps up the output voltage which reaches nominal output voltage during a soft-start time of 250  $\mu$ s (typical). This avoids excessive inrush current and creates a smooth output voltage rise slope. It also prevents excessive voltage drops of primary cells and rechargeable batteries with high internal impedance.

If the output voltage is not reached within the soft-start time, such as in the case of a heavy load, the converter enters regular operation. The TLV62565/6 are able to start into a pre-biased output capacitor. The converter starts with the applied bias voltage and ramps the output voltage to its nominal value.

### 10.3.4 Switch Current Limit

The switch current limit prevents the device from high inductor current and drawing excessive current from a battery or input voltage rail. Excessive current might occur with a heavy load or shorted output circuit condition.

The TLV62565/6 adopt valley current control by sensing the current of the low-side MOSFET. Once the low-side valley switch current limit is tripped, the low-side MOSFET is turned off and limits the inductor's valley current. The high-side current is also limited which is determined by the on time of the high-side MOSFET and inductor value calculated by [公式 1](#). For example, with 3.6  $V_{IN}$  to 1.8  $V_{OUT}$  and 2.2- $\mu$ H specification, the peak current limit is approximately 1.97 A with a typical valley current limit of 1.7 A.

Additionally, there is a secondary high-side current limit (typical 2 A) to prevent the current from going too high, which is shown in [图 14](#). Due to the internal propagation delay, the real current limit value might be higher than the static current limit in the electrical characteristics table.

## Feature Description (接下页)

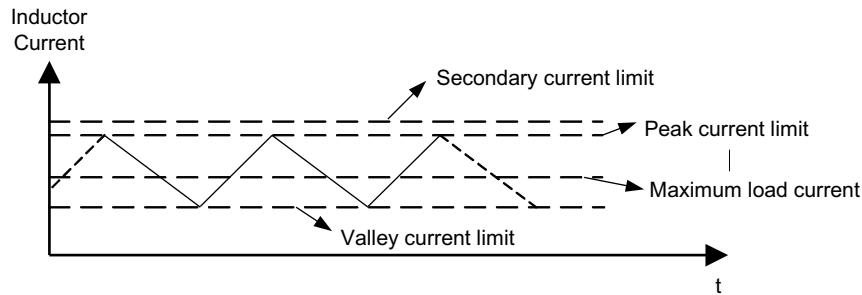

图 14. Switch Current Limit

$$I_{PEAK,LIMIT} = I_{VALLEY,LIMIT} + \Delta I_L$$

$$\Delta I_L = \frac{V_{OUT}}{L} \times \frac{(1-D)}{f_{SW}}$$

where:

- $I_{PEAK,LIMIT}$  is the high-side peak current limit
  - $I_{VALLEY,LIMIT}$  is the low-side valley current limit
- (1)

### 10.3.5 Power Good

The TLV62566 integrates a Power Good output going low when the output voltage is below its nominal value. The Power Good output stays high impedance once the output is above 95% of the regulated voltage and is low once the output voltage falls below typically 90% of the regulated voltage. The PG pin is an open drain output and is specified to sink typically up to 0.5 mA. The Power Good output requires a pull-up resistor connected to any voltage lower than 5.5 V. When the device is off due to UVLO or thermal shutdown, the PG pin is pulled to logic low.

## 10.4 Device Functional Modes

### 10.4.1 Under Voltage Lockout

To avoid mis-operation of the device at low input voltages, under voltage lockout is implemented that shuts down the device at voltages lower than  $V_{UVLO}$  with  $V_{HYS\_UVLO}$  hysteresis.

### 10.4.2 Thermal Shutdown

The device enters thermal shutdown once the junction temperature exceeds typically  $T_{JSD}$ . Once the device temperature falls below the threshold with hysteresis, the device returns to normal operation automatically. Power Good is pulled low when thermal protection is triggered.

## 11 Application and Implementation

### 注

Information in the following applications sections is not part of the TI component specification, and TI does not warrant its accuracy or completeness. TI's customers are responsible for determining suitability of components for their purposes. Customers should validate and test their design implementation to confirm system functionality.

### 11.1 Application Information

The TLV6256x devices are synchronous step-down converters optimized for small solution size and high efficiency. The devices integrate switches capable of delivering an output current up to 1.5 A.

### 11.2 Typical Application

TLV62565 2.7-V to 5.5-V input, 1.2-V output converter.

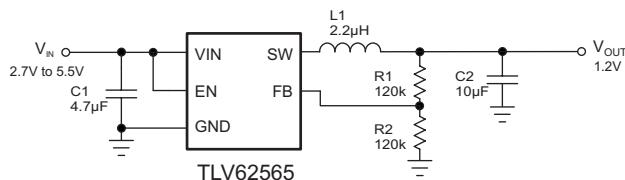

图 15. TLV62565 1.2-V Output Application

#### 11.2.1 Design Requirements

##### 11.2.1.1 Output Filter Design

The inductor and output capacitor together provide a low-pass frequency filter. To simplify this process, 表 3 outlines possible inductor and capacitor value combinations.

表 3. Matrix of Output Capacitor and Inductor Combinations

L [µH] <sup>(1)</sup>	C <sub>OUT</sub> [µF] <sup>(2) (3)</sup>				
	4.7	10	22	47	100
1					
2.2		+	+	+	
4.7					

- (1) Inductor tolerance and current de-rating is anticipated. The effective inductance can vary by +20% and -30%.
- (2) Capacitance tolerance and bias voltage de-rating is anticipated. The effective capacitance can vary by +20% and -50%.
- (3) For low output voltage applications ( $\leq 1.2$  V), more output capacitance is recommended (usually  $\geq 22$  µF) for smaller ripple.
- (4) Typical application configuration. '+' indicates recommended filter combinations.

### 11.2.1.2 Inductor Selection

The main parameters for inductor selection is inductor value and then saturation current of the inductor. To calculate the maximum inductor current under static load conditions, 公式 2 is given:

$$I_{L,MAX} = I_{OUT,MAX} + \frac{\Delta I_L}{2}$$

$$\Delta I_L = V_{OUT} \times \frac{1 - \frac{V_{OUT}}{V_{IN}}}{L \times f_{SW}}$$

where:

- $I_{OUT,MAX}$  is the maximum output current
  - $\Delta I_L$  is the inductor current ripple
  - $f_{SW}$  is the switching frequency
  - $L$  is the inductor value
- (2)

It is recommended to choose a saturation current for the inductor that is approximately 20% to 30% higher than  $I_{L,MAX}$ . In addition, DC resistance and size should also be taken into account when selecting an appropriate inductor. The recommended inductors are listed in 表 4.

**表 4. List of Recommended Inductors**

INDUCTANCE [ $\mu$ H]	CURRENT RATING [mA]	DIMENSIONS $L \times W \times H$ [mm $^3$ ]	DC RESISTANCE [m $\Omega$ typ]	TYPE	MANUFACTURER
2.2	2500	4 x 3.7 x 1.65	49	LQH44PN2R2MP0	Murata
2.2	3000	4 x 4 x 1.8	50	NRS4018T2R2MDGJ	Taiyo Yuden

### 11.2.1.3 Input and Output Capacitor Selection

The input capacitor is the low impedance energy source for the converter that helps provide stable operation. The closer the input capacitor is placed to the  $V_{IN}$  and GND pins, the lower the switch ring. A low ESR multilayer ceramic capacitor is recommended for best filtering. For most applications, 4.7- $\mu$ F input capacitance is sufficient; a larger value reduces input voltage ripple.

The architecture of the TLV62565/6 allow use of tiny ceramic-type output capacitors with low equivalent series resistance (ESR). These capacitors provide low output voltage ripple and are thus recommended. To keep its resistance up to high frequencies and to achieve narrow capacitance variation with temperature, it is recommended to use X7R or X5R dielectric. The TLV62565/6 are designed to operate with an output capacitance of 10  $\mu$ F to 47  $\mu$ F, as outlined in 表 3.

## 11.2.2 Detailed Design Procedure

### 11.2.2.1 Setting the Output Voltage

An external resistor divider is used to set output voltage. By selecting R1 and R2, the output voltage is programmed to the desired value. When the output voltage is regulated, the typical voltage at the FB pin is  $V_{FB}$ . 公式 3, 公式 4, and 公式 5 can be used to calculate R1 and R2.

When sizing R2, in order to achieve low quiescent current and acceptable noise sensitivity, use a minimum of 5  $\mu A$  for the feedback current  $I_{FB}$ . Larger currents through R2 improve noise sensitivity and output voltage accuracy but increase current consumption.

$$V_{OUT} = V_{FB} \times \left(1 + \frac{R1}{R2}\right) = 0.6V \times \left(1 + \frac{R1}{R2}\right) \quad (3)$$

$$R2 = \frac{V_{FB}}{I_{FB}} = \frac{0.6V}{5\mu A} = 120k\Omega \quad (4)$$

$$R1 = R2 \times \left(\frac{V_{OUT}}{V_{FB}} - 1\right) = R2 \times \left(\frac{V_{OUT}}{0.6V} - 1\right) \quad (5)$$

### 11.2.2.2 Loop Stability

The first step of circuit and stability evaluation is to look from a steady-state perspective at the following signals:

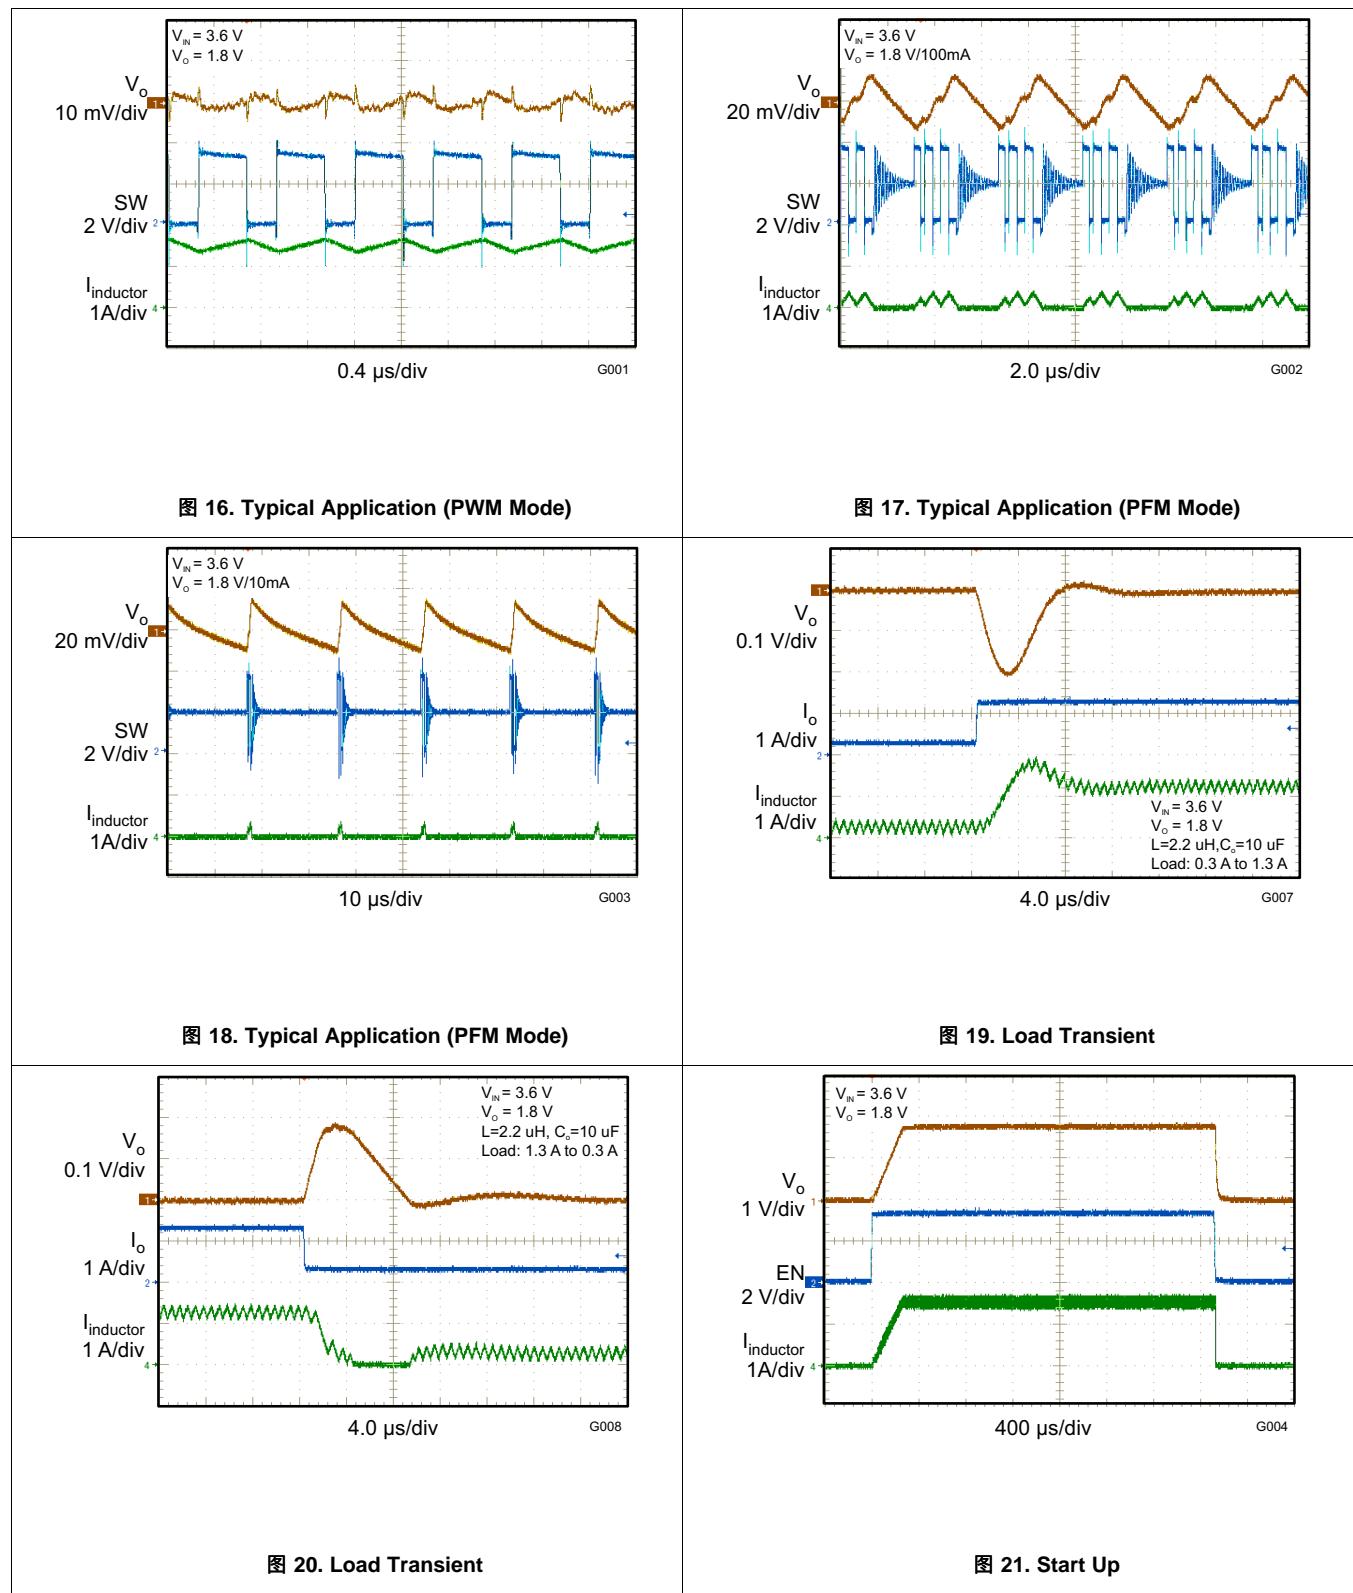

- Switching node, SW
- Inductor current,  $I_L$
- Output ripple voltage,  $V_{OUT(AC)}$

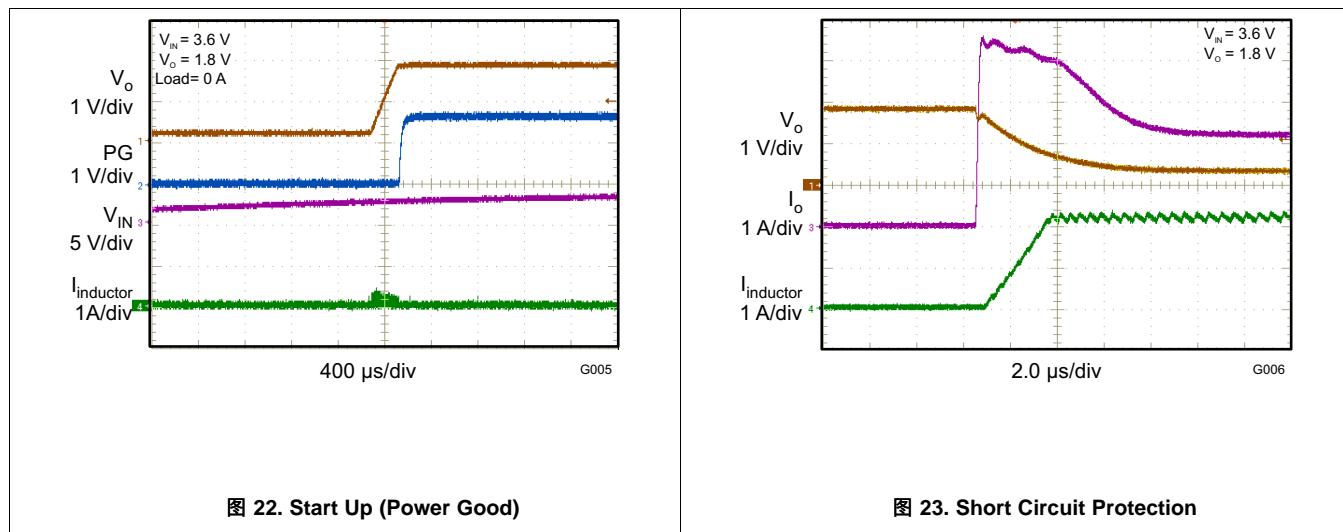

These are the basic signals that need to be measured when evaluating a switching converter. When the switching waveform shows large duty cycle jitter or the output voltage or inductor current shows oscillations, the regulation loop may be unstable. This is often a result of board layout and/or L-C combination. Applications with the recommended L-C combinations in 表 3 are designed for good loop stability as well as fast load transient response.

As a next step in the evaluation of the regulation loop, the load transient response is illustrated. The TLV62565/6 use a constant on time with valley current mode control, so the on time of the high-side MOSFET is relatively consistent from cycle to cycle when a load transient occurs. Whereas the off time adjusts dynamically in accordance with the instantaneous load change and brings  $V_{OUT}$  back to the regulated value.

During recovery time,  $V_{OUT}$  can be monitored for settling time, overshoot, or ringing which helps judge the stability of the converter. Without any ringing, the loop usually has more than 45° of phase margin.

### 11.2.3 Application Performance Curves

## 12 Power Supply Recommendations

The power supply to the TLV62565 and TLV62566 needs to have a current rating according to the supply voltage, output voltage and output current of the TLV62565 and TLV62566.

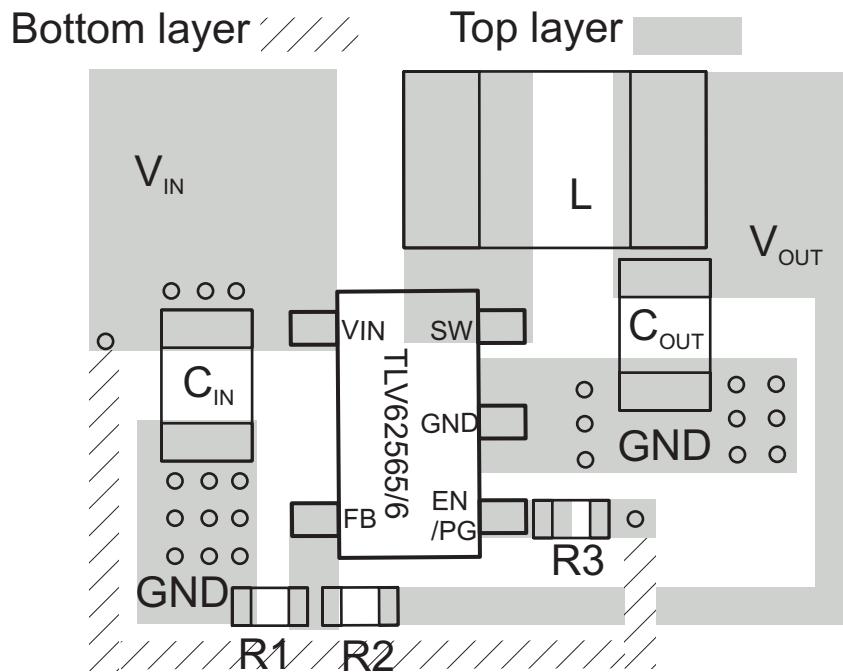

## 13 Layout

### 13.1 Layout Guidelines

The PCB layout is an important step to maintain the high performance of the TLV62565 devices.

- The input/output capacitors and the inductor should be placed as close as possible to the IC.
- This keeps the traces short. Routing these traces direct and wide results in low trace resistance and low parasitic inductance.
- A common power GND should be used.
- The low side of the input and output capacitors must be connected properly to the power GND to avoid a GND potential shift.
- The sense traces connected to FB is a signal trace .
- Special care should be taken to avoid noise being induced. By a direct routing, parasitic inductance can be kept small.
- GND layers might be used for shielding.
- Keep these traces away from SW nodes .

### 13.2 Layout Example

Note: PG connected to VIN via R3, EN direct connect to VIN

图 24. TLV62565 Layout

### 13.3 Thermal Considerations

Implementation of integrated circuits in low-profile and fine-pitch surface-mount packages typically requires special attention to power dissipation. Many system-dependent issues such as thermal coupling, airflow, convection surfaces, and the presence of other heat-generating components affect the power dissipation limits of a given component.

Two basic approaches for enhancing thermal performance are listed below:

- Improving the power dissipation capability of the PCB design
- Introducing airflow in the system

For more details on how to use the thermal parameters, see the application notes: Thermal Characteristics Application Notes [SZZA017](#) and [SPRA953](#).

TLV62566	<a href="#">请单击此处</a>				

### 14.4 商标

All trademarks are the property of their respective owners.

### 14.5 静电放电警告

这些装置包含有限的内置 ESD 保护。存储或装卸时，应将导线一起截短或将装置放置于导电泡棉中，以防止 MOS 门极遭受静电损伤。

### 14.6 术语表

#### SLYZ022 — TI 术语表。

这份术语表列出并解释术语、首字母缩略词和定义。

## 15 机械、封装和可订购信息

以下页中包括机械、封装和可订购信息。这些信息是针对指定器件可提供的最新数据。这些数据会在无通知且不对本文档进行修订的情况下发生改变。欲获得该数据表的浏览器版本，请查阅左侧的导航栏。

## 重要声明

德州仪器(TI) 及其下属子公司有权根据 JESD46 最新标准, 对所提供的产品和服务进行更正、修改、增强、改进或其它更改, 并有权根据 JESD48 最新标准中止提供任何产品和服务。客户在下订单前应获取最新的相关信息, 并验证这些信息是否完整且是最新的。所有产品的销售都遵循在订单确认时所提供的TI 销售条款与条件。

TI 保证其所销售的组件的性能符合产品销售时 TI 半导体产品销售条件与条款的适用规范。仅在 TI 保证的范围内, 且 TI 认为有必要时才会使用测试或其它质量控制技术。除非适用法律做出了硬性规定, 否则没有必要对每种组件的所有参数进行测试。

TI 对应用帮助或客户产品设计不承担任何义务。客户应对其使用 TI 组件的产品和应用自行负责。为尽量减小与客户产品和应用相关的风险, 客户应提供充分的设计与操作安全措施。

TI 不对任何 TI 专利权、版权、屏蔽作品权或其它与使用了 TI 组件或服务的组合设备、机器或流程相关的 TI 知识产权中授予 的直接或隐含权限作出任何保证或解释。TI 所发布的与第三方产品或服务有关的信息, 不能构成从 TI 获得使用这些产品或服务的许可、授权、或认可。使用此类信息可能需要获得第三方的专利权或其它知识产权方面的许可, 或是 TI 的专利权或其它知识产权方面的许可。

对于 TI 的产品手册或数据表中 TI 信息的重要部分, 仅在没有对内容进行任何篡改且带有相关授权、条件、限制和声明的情况下才允许进行复制。TI 对此类篡改过的文件不承担任何责任或义务。复制第三方的信息可能需要服从额外的限制条件。

在转售 TI 组件或服务时, 如果对该组件或服务参数的陈述与 TI 标明的参数相比存在差异或虚假成分, 则会失去相关 TI 组件 或服务的所有明示或暗示授权, 且这是不正当的、欺诈性商业行为。TI 对任何此类虚假陈述均不承担任何责任或义务。

客户认可并同意, 尽管任何应用相关信息或支持仍可能由 TI 提供, 但他们将独自负责满足与其产品及在其应用中使用 TI 产品 相关的所有法律、法规和安全相关要求。客户声明并同意, 他们具备制定与实施安全措施所需的全部专业技术知识, 可预见故障的危险后果、监测故障及其后果、降低有可能造成人身伤害的故障的发生机率并采取适当的补救措施。客户将全额赔偿因 在此类安全关键应用中使用任何 TI 组件而对 TI 及其代理造成的任何损失。

在某些场合中, 为了推进安全相关应用有可能对 TI 组件进行特别的促销。TI 的目标是利用此类组件帮助客户设计和创立其特有的可满足适用的功能安全性标准和要求的终端产品解决方案。尽管如此, 此类组件仍然服从这些条款。

TI 组件未获得用于 FDA Class III (或类似的生命攸关医疗设备) 的授权许可, 除非各方授权官员已经达成了专门管控此类使用的特别协议。

只有那些 TI 特别注明属于军用等级或“增强型塑料”的 TI 组件才是设计或专门用于军事/航空应用或环境的。购买者认可并同意, 对并非指定面向军事或航空航天用途的 TI 组件进行军事或航空航天方面的应用, 其风险由客户单独承担, 并且由客户独 力负责满足与此类使用相关的所有法律和法规要求。

TI 已明确指定符合 ISO/TS16949 要求的产品, 这些产品主要用于汽车。在任何情况下, 因使用非指定产品而无法达到 ISO/TS16949 要求, TI不承担任何责任。

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.**OBSOLETE:** TI has discontinued the production of the device.(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.**TBD:** The Pb-Free/Green conversion plan has not been defined.**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

## MECHANICAL DATA

DBV (R-PDSO-G5)

PLASTIC SMALL-OUTLINE PACKAGE

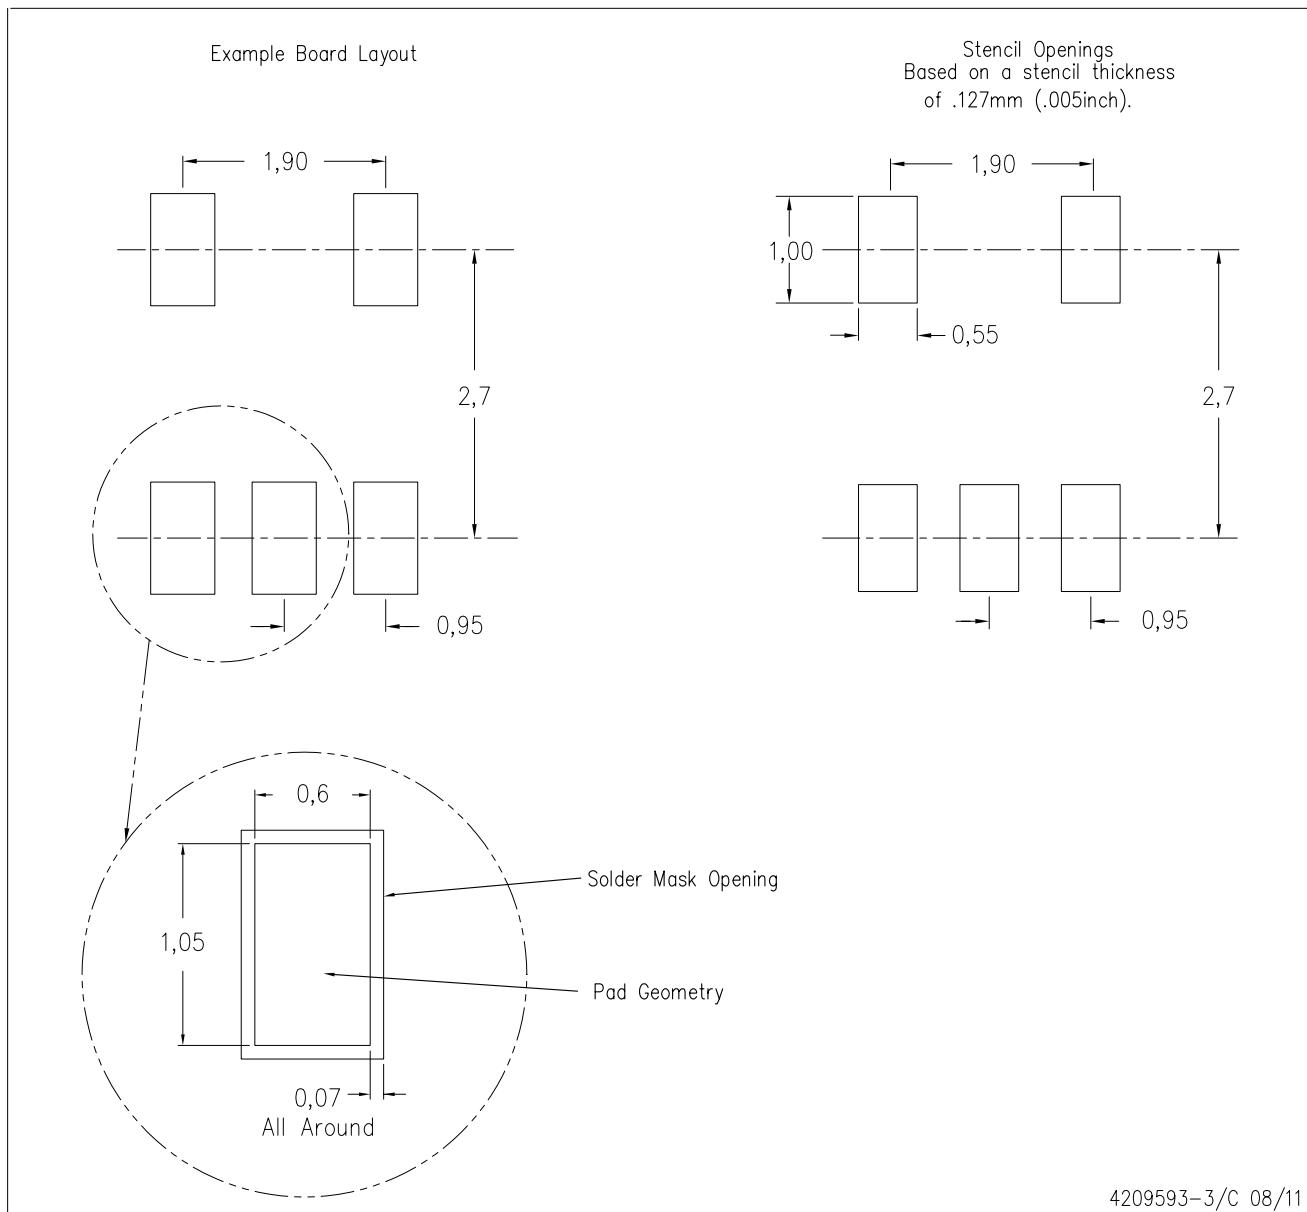

4073253-4/N 12/14

- NOTES:
- All linear dimensions are in millimeters.
  - This drawing is subject to change without notice.
  - Body dimensions do not include mold flash or protrusion. Mold flash and protrusion shall not exceed 0.15 per side.
  - Falls within JEDEC MO-178 Variation AA.

## LAND PATTERN DATA

DBV (R-PDSO-G5)

PLASTIC SMALL OUTLINE

- NOTES:
- A. All linear dimensions are in millimeters.
  - B. This drawing is subject to change without notice.
  - C. Customers should place a note on the circuit board fabrication drawing not to alter the center solder mask defined pad.
  - D. Publication IPC-7351 is recommended for alternate designs.
  - E. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Example stencil design based on a 50% volumetric metal load solder paste. Refer to IPC-7525 for other stencil recommendations.

## 重要声明

德州仪器(TI) 及其下属子公司有权根据 JESD46 最新标准, 对所提供的产品和服务进行更正、修改、增强、改进或其它更改, 并有权根据 JESD48 最新标准中止提供任何产品和服务。客户在下订单前应获取最新的相关信息, 并验证这些信息是否完整且是最新的。所有产品的销售都遵循在订单确认时所提供的 TI 销售条款与条件。
